- *Department of Transportation*
CERTIFIED

Established to be a leading producer of structural prestressed/precast concrete, American Concrete Products has successfully partnered with customers in the railroad industry since 1952.

As specialists in manufacturing precast bridge girders, crossing panels and signal foundations we strive to out work our competitors, delivering products to spec, on-time and within budget.

PERFORMANCE YOU CAN RELY ON.

Our sales staff will respond to all types of RFPs, providing comprehensive and detailed proposals that you can count on. Our professional engineers and project managers apply value engineering experience to every project - ensuring cost and time savings, as well as offering field assistance before, during and after project completion to guarantee a job well done.

WHERE HIGH-STANDARDS, CAPACITY AND EFFICIENCY MEET.

Our manufacturing facilities total 79 acres with over 100,000 square feet under roof, all efficiently designed to support the most rigorous production schedules. With mechanics to keep all equipment on-line, our manufacturing facility includes:

- Two overhead high-capacity cranes for indoor precast production
- Multiple bridge cranes with capacities of 10, 15, 20 and 25 tons
- Steel and rebar fabrication shop and carpentry shop
- A yard equipped with numerous modern self-stressing beds, offering the flexibility and precision for efficient production flow
- Rolling gantry equipment to handle all product up to 100 tons
- A delivery fleet outfitted with tractor trailers and the ability to preload numerous railcars for safe and timely delivery
